The LT-8 Nano-coating is a high-performance fluoropolymer dissolved in a non-flammable fluorinated solvent.

When applied to products the LT-8 exhibits superior hydrophobic (water repellent) and oleophobic (oil repellent) properties at a sub micron level.

Designed for protection of high quality products like printed circuit boards (PCBs), LT-8 will protect a board and the electronic components from moisture, water, condensation and corrosion.

LT-8 also excels in preventing damage from solvents and other chemicals.

The LT-8 material can be applied to printed circuit boards (PCBs) and other electronic devices without the need for masking when applied at 1-2 um film thickness.

Features

- Highly repellent to liquid (hydrophobic) and oil (oleophobic)
- No masking requirements when applied to circuit boards
- Non-flammable for improved safety in production
- Dries extremely quickly at room temperature
- Lowest cost conformal coating material
- Resistant to solvents and chemicals
- Wide temperature range performance
- High dielectric strength material
- Easily inspected with a UV trace
- Easy to apply by spray and dip methods
